

B&A Results  
after 6 treatments

#meetBela

“ I have so much more confidence in my appearance and when I look in the mirror, I see a younger, fresher and more confident me. ”

- Sally, age 46

FAQ

**What should I expect after my first treatment?**

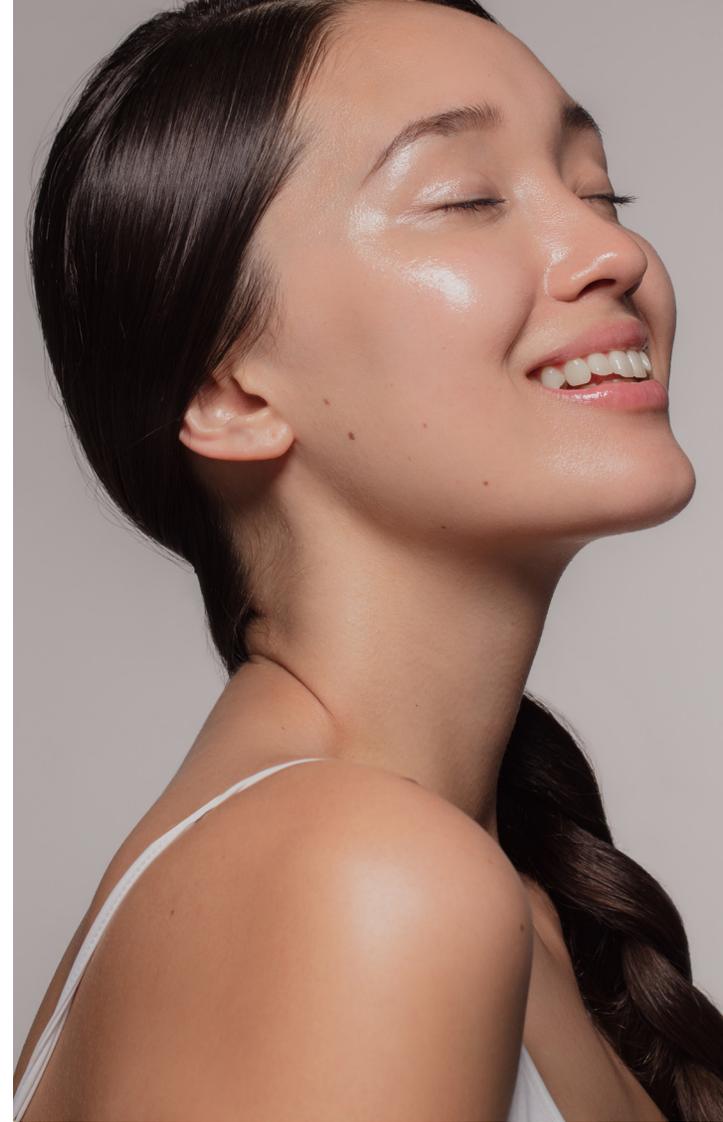

Following a single treatment you may notice that your skin feels smoother, clean and hydrated. Patients often experience a refreshed appearance and glow.

**How many treatments will I need?**

To improve overall skin health and appearance, and for skin conditions such as acne, pigmentation, rosacea and uneven skin tone, it's important to have a series of treatments for the best result. 3-6 treatments are recommended and the treatments can be spaced 1-2 weeks apart. After this series, a monthly treatment is recommended for continued support in maintaining healthy skin.

**Is there downtime?**

After the treatment, your skin may have a slight rosy glow for a few hours. This is patient dependent, based on the level of skin reactivity and sensitivity. You will need to protect your skin with a moisturizer and a physical broad-spectrum chemical free SPF50. Your technician will recommend the appropriate skin care products needed to optimize your results at home and protect the health of your skin.
